

ANTHONY ENUJEKO

Kadibiaenu@gmail.com | github.com/Khadibia

PROFESSIONAL PROFILE

Applied AI & Machine Learning Engineer with hands-on experience building and deploying production AI systems across fraud detection, conversational AI, intelligent automation, and computer vision. Skilled in developing scalable ML pipelines, low-latency inference services, LLM-powered workflows, and MCP-based tool servers for agent/LLM integration. Experienced across backend engineering, cloud deployment, model evaluation, and AI orchestration, including tool-calling loops, system prompts, and Hugging Face Inference API, with a strong focus on building systems that operate reliably under real-world conditions. Web stack includes Django REST Framework for API-centric services; also FastAPI.

CORE CAPABILITIES

Technical skills (data & visualisation): Pandas, NumPy, Requests, Matplotlib, Seaborn.

AI & Conversational Systems: LLMs, conversational AI, intent-aware workflows, RAG pipelines, AI agents, MCP (Model Context Protocol), tool-calling loops, system prompts, prompt engineering, Hugging Face Transformers, Hugging Face Inference API, LLaMA models.

Workflow & Orchestration: n8n, Zapier, Airflow, MCP stdio transport, subprocess tool servers.

Machine Learning: PyTorch, scikit-learn, XGBoost, CNNs, YOLO, DeepLab, SAM, Bayesian modelling, fraud detection systems.

Production ML & Deployment: GCP (Cloud Run, Compute Engine, Cloud Storage), AWS, Docker, CI/CD, MLflow (experiment tracking, model registry, champion/challenger), model versioning.

Backend & APIs: FastAPI, Flask, Django REST Framework (extensive), Django (foundational), REST APIs, scalable inference services, backend integrations.

Data & Analytics: Python, SQL, EDA, statistical modelling, Bayesian analysis, time-series forecasting.

Geospatial: QGIS, satellite and drone imagery processing, geospatial ML pipelines.

Version Control: Git.

PROFESSIONAL EXPERIENCE

AI Engineer | Cencori

June 2026 – Present

San Francisco, California, US (Part-time)

- Built Cencori's MCP Server, a read only MCP server that exposes Cencori's inference runtime and agent execution primitives to public and authenticated clients.

Machine Learning & Backend Engineer | FieldWatch

Oct 2025 – Present

Lagos, Nigeria (Remote)

- Developed production computer vision models for semantic segmentation and object detection on aerial, drone, and satellite imagery. Fine-tuned YOLO, DeepLab, and Meta SAM across 3,100 labelled image tiles and achieved an IoU of 0.94 with DeepLab.
- Built and deployed scalable ML inference services on GCP via REST APIs, processing five-hectare satellite areas in roughly 2 minutes per batch. This was a live production system, not a demo.
- Containerised and productionised models using Docker and Cloud Run, handling autoscaling, model versioning, and artefact storage in Google Cloud Storage.
- Built backend data pipelines for ingestion, preprocessing, orchestration, and model retraining, enabling continuous deployment of updated models.
- Integrated geospatial ML pipelines with QGIS for spatial annotation, validation, and analysis of satellite outputs.
- Developed and shipped the FieldWatch Vectorizer: a production QGIS plugin (3.x/4.x) integrating SAM-based interactive segmentation, cloud API inference for large-area building and solar panel detection, and drone imagery ordering workflows; includes Qt6-compatible UI.

Data Scientist & AI/ML Engineer | Ihifix Technologies

Feb 2025 – Present

Kaduna, Nigeria

- Built and shipped ChurnPred; an end-to-end MLOps pipeline on 37k customer records: EDA, feature engineering, XGBoost champion (ROC-AUC 0.976, F1 0.939) vs PyTorch NN challenger, MLflow experiment tracking and model registry, FastAPI inference API with champion/challenger endpoints, and Docker deployment.
github.com/Khadibia/churn-prediction-mlops
- Built MCP (Model Context Protocol) tool servers in Python exposing internal business systems — including payment and registration data — to LLM agents via stdio transport, enabling natural language querying of live operational data.
- Designed RAG pipelines that grounded LLM responses on internal datasets to improve response accuracy and reduce hallucinations.
- Built LLM-powered AI applications using Hugging Face Transformers and LLaMA models for contextual retrieval, operational automation, and real-time customer interactions — including tool-calling loops and structured system prompts.
- Developed a fraud detection system using XGBoost, Bayesian modelling, and cross-validated hyperparameter tuning, achieving 91% accuracy while improving suspicious activity detection reliability.
- Built backend APIs and orchestration pipelines using Django REST Framework and FastAPI, supporting scalable AI workflows and low-latency inference operations.
- Built and deployed n8n workflow automations integrating Paystack payment webhooks, WhatsApp/SMS APIs, and Google Sheets to streamline registration, payments, and notifications, improving operational efficiency and reliability.
- Designed demand forecasting models using time-series analysis to improve inventory planning and reduce reactive procurement decisions.

Data Entry & Management Assistant | Cleanserve Integrated Energy Solutions

May 2024 – Dec 2024

Kano, Nigeria

- Maintained accurate records of fuel inventory and delivery schedules, ensuring data consistency and timely operational reporting. Direct exposure to how an energy operations business tracks and manages physical assets.

Data Analyst Intern | Megarivet Nigeria Limited

Jan 2023 – Jun 2023

Kano, Nigeria

- Cleaned and organised large datasets from historical construction projects to prepare them for analysis.
- Analysed project data to identify patterns predictive of delays and cost overruns, giving management early warning signals to act on before problems escalated.

EDUCATION & CERTIFICATIONS

B.Eng. Civil Engineering — Bayero University Kano · Graduated 2024

Hugging Face AI Fundamentals Certificate · 2026

Applied AI Lab: Deep Learning for Computer Vision · 2025

Google Data Analytics Professional Certificate · 2023
